for Electric Lamps—

Nomenclature for Envelope Shapes
Intended for Use with Electric Lamps
ANSI C78.79-2014

An American National Standard implies a consensus of those substantially concerned with its scope and provisions. It is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether he has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards. Users are cautioned to obtain the latest editions.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.
Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer. An American National Standard implies a consensus of those substantially concerned with its scope and provisions. Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution. The existence of an American National Standard does not in any respect preclude anyone, whether s/he has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards. It is intended as a guide to aid the manufacturer, the consumer, and the general public.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the Committee Secretary referred to in the foreword.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.
Foreword
(This Foreword is not part of ANSI C78.79.-2014.)

This is a revised and re-designated standard recently updated by American National Standards Committee C78 on Electric Lamps.

Suggestions for improvement of this standard should be submitted to the Senior Technical Director, Operations National Electrical Manufacturers Association 1300 North 17th Street, Suite 900 Rosslyn, VA 22209

This standard was processed and approved by Accredited Standards Committee on Electric Lamps, ASC C78. Committee approval of the standard does not necessarily imply that all committee members voted for that approval.

The purpose of the revision and re-designation of this horizontal standard is to include solid state light sources that are functional applications of traditional lamps (incandescent, fluorescent and high intensity discharge lamps). This horizontal standard was first developed in the 1940’s by the Accredited Standards Committee (ASC) C79 under this secretariat. ASC C79 has been disbanded and consolidated into the work program of ASC C78.

The following represents some of the select changes incorporated into this proposed revision/re-designation:

- Change designation from ASC C79 to ASC C78
- A Patent Disclaimer statement
- The statement “glass bulb” replaced with “envelope shapes” for the electric lamp
- Inclusion of relevant normative standards
- Inclusion of envelope shapes germane to solid state lighting. As an example, the “MRX” (multifaceted reflector, extended).
# TABLE OF CONTENTS

Foreword ........................................................................................................................................ iii

1 Scope ........................................................................................................................................ 1

2 Definitions .................................................................................................................................. 2

Nomenclature for Envelope Shapes
Intended for Use with Electric Lamps

1 Scope

This standard describes a system of nomenclature that provides designations for envelope shapes used for all electric lamps. This system is shown in customary (inch-based) units and SI (metric-based) units. These envelope shapes are intended to be used with ANSI standardized base and holder systems. These general shapes are not associated with specific base and holder systems; they may be used with one or more of these systems.

The nomenclature system is intended for application with LED lamps and glass bulbs that originate both as parts and as stock. As a part, a bulb is assembled directly into finished lamps without major alterations. As stock, a bulb may be re-worked or altered during lamp assembly, while maintaining its basic identifying characteristics.

1.1 Important Patent Disclaimer

It is possible that some of the elements of this document may be the subject of patent rights. When this document was approved for publication, the National Electrical Manufacturers Association did not know of any patent applications, patents pending, or existing patents. NEMA shall not be held responsible for identifying any or all such patent rights.

1.2 Normative References

The following standards contain provisions, which through reference in this text constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.

The following normative reference standards are the other ANSI lamp specific dimensional and performance standards that should be used with this standard.

- ANSI C81.61-2009  Bases (Caps) for Electric Lamps
- ANSI C81.62-2009  Electric Lampholders
