All intellectual property rights, including, but not limited to, the rights of reproduction, translation, and display are reserved under the laws of the United States of America, the Universal Copyright Convention, the Berne Convention, and the International and Pan American Copyright Conventions. Except as licensed or permitted, you may not copy these materials without prior written permission from AASHTO, ITE, or NEMA. Use of these materials does not give you any rights of ownership or claim of copyright in or to these materials.

Visit www.ntcip.org for other copyright information, for instructions to request reprints of excerpts, and to request reproduction that is not granted below.

PDF File License Agreement

To the extent that these materials are distributed by AASHTO / ITE / NEMA in the form of an Adobe® Portable Document Format (PDF) electronic data file (the "PDF file"), AASHTO / ITE / NEMA authorizes each registered PDF file user to view, download, copy, or print the PDF file available from the authorized Web site, subject to the terms and conditions of this license agreement:

- a) you may download one copy of each PDF file for personal, noncommercial, and intraorganizational use only;
- b) ownership of the PDF file is not transferred to you; you are licensed to use the PDF file;
- c) you may make one more electronic copy of the PDF file, such as to a second hard drive or burn to a CD;
- d) you agree not to copy, distribute, or transfer the PDF file from that media to any other electronic media or device;
- e) you may print one paper copy of the PDF file;
- f) you may make one paper reproduction of the printed copy;
- g) any permitted copies of the PDF file must retain the copyright notice, and any other proprietary notices contained in the file;
- h) the PDF file license does not include (1) resale of the PDF file or copies, (2) republishing the content in compendiums or anthologies, (3) publishing excerpts in commercial publications or works for hire, (4) editing or modification of the PDF file except those portions as permitted, (5) posting on network servers or distribution by electronic mail or from electronic storage devices, and (6) translation to other languages or conversion to other electronic formats;
- i) other use of the PDF file and printed copy requires express, prior written consent.

Data Dictionary and MIB Distribution Permission

To the extent that these materials are distributed by AASHTO / ITE / NEMA in the form of a Data Dictionary ("DD") or Management Information Base ("MIB"), AASHTO / ITE / NEMA extend the following permission:

You may make or distribute unlimited copies, including derivative works, of the DD or MIB, including copies for commercial distribution, provided that:

- a) each copy you make or distribute includes the citation "Derived from NTCIP 0000 [insert the standard number]. Copyright by AASHTO / ITE / NEMA. Used by permission.";

- b) the copies or derivative works are not made part of the standard publications or works offered by other standard developing organizations or publishers or as works-for-hire not associated with commercial hardware or software products intended for field implementation;
- c) use of the DD or MIB is restricted in that the syntax fields may only be modified to define: 1) a more restrictive subrange; or 2) a subset of the standard enumerated values; or 3) a set of retired and defined enumerated values for systems supporting multiversion interoperability;
- d) the description field may be modified but only to the extent that: 1) the more restrictive subrange is defined; and 2) only those bit values or enumerated values that are supported are listed.

These materials are delivered “AS IS” without any warranties as to their use or performance.

AASHTO / ITE / NEMA and their suppliers do not warrant the performance or results you may obtain by using these materials. AASHTO / ITE / NEMA and their suppliers make no warranties, express or implied, as to noninfringement of third party rights, merchantability, or fitness for any particular purpose. In no event will AASHTO / ITE / NEMA or their suppliers be liable to you or any third party for any claim or for any consequential, incidental or special damages, including any lost profits or lost savings, arising from your reproduction or use of these materials, even if an AASHTO / ITE / NEMA representative has been advised of the possibility of such damages.

Some states or jurisdictions do not allow the exclusion or limitation of incidental, consequential, or special damages, or the exclusion of implied warranties, so the above limitations may not apply to a given user.

Use of these materials does not constitute an endorsement or affiliation by or between AASHTO, ITE, or NEMA and the user, the user’s company, or the products and services of the user’s company.

If the user is unwilling to accept the foregoing restrictions, he or she should immediately return these materials.

PRL and RTM Distribution Permission

To the extent that these materials are distributed by AASHTO / ITE / NEMA in the form of a Profile Requirements List (“PRL”) or a Requirements Traceability Matrix (“RTM”), AASHTO / ITE / NEMA extend the following permission:

- a) you may make or distribute unlimited copies, including derivative works of the PRL (then known as a Profile Implementation Conformance Statement (“PICS”)) or the RTM, provided that each copy you make or distribute contains the citation “Based on NTCIP 0000 [insert the standard number] PRL or RTM. Used by permission. Original text © AASHTO / ITE / NEMA.”;
- b) you may only modify the PRL or the RTM by adding: 1) text in the Project Requirements column, which is the only column that may be modified to show a product’s implementation or the project-specific requirements; and/or 2) additional table columns or table rows that are clearly labeled as ADDITIONAL for project-unique or vendor-unique features; and
- c) if the PRL or RTM excerpt is made from an unapproved draft, add to the citation “PRL (or RTM) excerpted from a draft standard containing preliminary information that is subject to change.”

This limited permission does not include reuse in works offered by other standards developing organizations or publishers, and does not include reuse in works-for-hire, compendiums, or electronic storage devices that are not associated with procurement documents, or commercial hardware, or commercial software products intended for field installation.

A PICS is a Profile Requirements List that is completed to indicate the features that are supported in an implementation. Visit www.ntcip.org for information on electronic copies of the MIBs, PRLs, and RTMs.

Content and Liability Disclaimer

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

AASHTO, ITE, and NEMA standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and seeks out the views of persons who have an interest in the topic covered by this publication. While AASHTO, ITE, and NEMA administer the process and establish rules to promote fairness in the development of consensus, they do not write the document and they do not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in their standards and guideline publications.

AASHTO, ITE, and NEMA disclaim liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. AASHTO, ITE, and NEMA disclaim and make no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. AASHTO, ITE, and NEMA do not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, AASHTO, ITE, and NEMA are not undertaking to render professional or other services for or on behalf of any person or entity, nor are AASHTO, ITE, and NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

AASHTO, ITE, and NEMA have no power, nor do they undertake to police or enforce compliance with the contents of this document. AASHTO, ITE, and NEMA do not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to AASHTO, ITE, or NEMA and is solely the responsibility of the certifier or maker of the statement.

Trademark Notice

NTCIP is a trademark of AASHTO / ITE / NEMA. All other marks mentioned in this standard are the trademarks of their respective owners.

ACKNOWLEDGEMENTS

NTCIP 1210 v01 was prepared by the NTCIP Field Master Stations Working Group (FMS WG), which is a subdivision of the Joint Committee on the NTCIP. The Joint Committee on the NTCIP is organized under a Memorandum of Understanding among the American Association of State Highway and Transportation Officials (AASHTO), the Institute of Transportation Engineers (ITE), and the National Electrical Manufacturers Association (NEMA). The Joint Committee on the NTCIP consists of six representatives from each of the standards organizations, and provides guidance for NTCIP development.

When NTCIP 1210 v01 was prepared, the following individuals were active members of the NTCIP FMS WG:

- Robert Betts
- John Black
- Al Bonificio
- Rick Denney (Chair)
- Robert De Roche
- Bud Kent
- Kai Leung
- Andy Mao
- Greg Mizell
- Ken Montgomery
- Saeed Nowkhasteh
- Peter Ragsdale
- Guillermo Ramos
- Joerg Rosenbohm
- Jo Versavel

Other individuals providing input to NTCIP 1210 v01 include:

- Ralph Boaz
- Jack Brown
- Jeff Brummond
- Patrick Chan
- Blake Christie
- Gary Duncan
- Bruce Eisenhart
- Jim Forbes
- Craig Gardner
- Curtis Gobeli
- Curtis Herrick
- David McKinley
- John Michael
- Amrish Raj
- David Richie
- Mike Shea
- Ray Starr
- Warren Tighe
- Ken Vaughn
- Jeris White

In addition to the many volunteer efforts, recognition is also given to those organizations that supported FMS WG efforts by providing comments and funding, including:

- U.S. Department of Transportation, Research and Innovative Technology Administration
- Caltrans
- Consensus Systems Technologies
- Econolite Control Products
- Florida Department of Transportation
- G.C. Herrick and Associates
- Georgia Department of Transportation
- Harris County
- Iteris
- McCain Traffic Supply, Inc.
- Ministry of Transportation, Ontario, Canada
- Minnesota Department of Transportation
- Naztec, Inc.
- New York State DOT
- Noblis
- Peek Traffic Systems
- Pillar Consulting
- Robert De Roche Consulting
- Siemens ITS
- Southwest Research Institute
- SRF Consulting Group, Inc.
- Telvent Farradyne
- Texas Department of Transportation
- Washington State Department of Transportation

INTRODUCTION

NTCIP 1210 v01 defines the management information related to a Signal System Master (SSM). SSM management information includes individual parameters that represent the configuration, status, and control information that is unique to SSMs. NTCIP 1210 v01 also includes pre-defined message sets of these parameters and others from other standards to address operational and informational exchanges in a baseline system configuration. The parameters and message sets are collectively referred to as objects. Specific groupings of these parameters and others to address operational configuration, monitoring, and control in a baseline system configuration are defined. The objects are defined using several ASN.1 Macros that were initially developed for use with Internet information management. The macros have been modified to include additional information specific to NTCIP and ITS Data Dictionaries and Message Sets.

NTCIP 1210 v01 defines requirements that are applicable to an NTCIP environment that involves the control of traffic signal controllers. While the term SSM implies some type of physical device, many of the data concepts are applicable to any logical implementation. By definition, an SSM operates in the context of a "system" that includes traffic signal controllers and office, computer-based traffic management center software. NTCIP 1210 v01, therefore, imposes requirements on both of these "system" components, as well.

NTCIP 1210 v01 defines requirements that are applicable to all NTCIP environments and also contains optional and conditional elements that are applicable to specific environments for which they are intended. NTCIP 1210 v01 is an NTCIP Device Data Dictionary Standard and an Information Profile standards publication. Device Data Dictionaries Standards express management information in terms of objects (data elements, data frames, and messages) for use within NTCIP systems. Information Profiles reference one or more object definition, data dictionary, and/or message set standards to fully describe the information level requirements.

The following keywords apply to NTCIP 1210 v01: AASHTO, ITE, NEMA, NTCIP, FMS, and SSM.

In 1992, the NEMA 3-TS Transportation Management Systems and Associated Control Devices Section began development of the NTCIP. The NEMA Transportation Section's purpose was in response to user needs to include standardized systems communications in NEMA TS 2, *Traffic Controller Assemblies*. Under the guidance of the Federal Highway Administration's NTCIP Steering Group, the NEMA effort was expanded to include the development of communications standards for all transportation field devices that could be used in an Intelligent Transportation Systems (ITS) network.

In September 1996, an agreement was executed among AASHTO, ITE, and NEMA to jointly develop, approve, and maintain the NTCIP standards. The Joint Committee on the NTCIP formed the Field Master Working Group to define a common set of management information related to roadside devices that act in a supervisory capacity. The first meeting of the working group was in February 2000. The WG name was subsequently revised to Field Management Stations WG (FMS WG).

After considering all functionality that could be considered appropriate to a field master, the FMS WG developed a work plan based upon a two-part standard. The initial part, *Object Definitions for Signal System Masters*, addresses the information and operational requirements of traditional "closed-loop" systems. A second part was envisioned to address requirements of an advanced "field management station" that go beyond signal controllers to include such devices as dynamic message signs, environmental system sensors, CCTV camera controllers, and ramp metering controllers.

For more information about NTCIP standards, visit the NTCIP website at www.ntcip.org.

User Comment Instructions

The term “User Comment” includes any type of written inquiry, comment, question, or proposed revision, from an individual person or organization, about any part of NTCIP 1210 v01’s content. A “Request for Interpretation” on NTCIP 1210 v01 is also classified as a User Comment. User Comments are solicited at any time. In preparation of NTCIP 1210 v01, input of users and other interested parties was sought and evaluated.

All User Comments are referred to the committee responsible for developing and/or maintaining this NTCIP 1210 v01. The committee chairperson, or their designee, may contact the submitter for clarification of the User Comment. When the committee chairperson or designee reports the committee’s consensus opinion related to the User Comment, that opinion is forwarded to the submitter. The committee chairperson may report that action on the User Comment may be deferred to a future committee meeting and/or a future revision of NTCIP 1210 v01. Previous User Comments and their disposition may be available for reference and information at www.ntcip.org.

A User Comment should be submitted to this address:

NTCIP Coordinator
National Electrical Manufacturers Association
1300 North 17th Street, Suite 900
Rosslyn, Virginia 22209-3801
e-mail: ntcip@nema.org

A User Comment should be submitted in the following form:

Standards Publication number and version:
Page:
Section, Paragraph, Figure or Table:
Comment:
Editorial or Substantive?:
Suggested Alternative Language:

Please include your name, organization, and address in your correspondence.

Approvals

NTCIP 1210 v01 was separately balloted and approved by AASHTO, ITE, and NEMA after recommendation by the Joint Committee on the NTCIP. Each organization has approved NTCIP 1210 v01 as the following standard type, as of the date:

AASHTO—Standard Specification; May 2011
ITE—Software Standard; June 2011
NEMA—Standard; December 2010

History

The following is the development history of NTCIP 1210 v01:

NTCIP 1210 v01—the User Comment Drafts (UCDs). The FMS WG started drafting NTCIP 1210 v01 in the year 2000. Two UCDs were accepted by the NTCIP Joint Committee—the first UCD, version v01.14, was accepted in December 2001, and the second UCD, version v01.46, was accepted in August 2007. Because of the number of user comments on the first UCD, significant revisions included addition of Systems Engineering content. The additional content included a Signal System Master Concept of

Operations, user needs, and requirements. With the minor version numbering reaching v01.40, the FMS WG added dialogs and objects to the draft, which satisfied the ConOps and fulfilled the requirements. Traceability was provided by the PRL and RTM.

NTCIP 1210 v01—the Recommended Standard. In April 2008, v01.47 disposed of the second round of User Comments. In May 2008, the v01.48 proposed Recommended Standard was submitted to the NTCIP Joint Committee for acceptance. In May 2008, the NTCIP Joint Committee accepted v01.48 as the Recommended Standard. However, in August 2008, the JC had extended discussion on the approach to resolve quality issues. Planning for a quality audit ensued.

NTCIP 1210 v01—the substitute Recommended Standard. In December 2008, a Walkthrough Exercise of NTCIP 1210 v01.49 was conducted for logical consistency and traceability. In January through March 2009, the decisions from the Walkthrough Exercise were posted, the MIB was checked, and tracing was quality checked in several minor versions ~v01.51. In March 2009, the 1210 MIB was reported to compile with no errors. Also in March 2009, the NTCIP Joint Committee approved the substitution of v01.52 as the Recommended Standard.

NTCIP 1210 v01—ballot and Joint Approval. In 2009, the normative reference dependency of “same or higher status” delayed issuance of NTCIP 1210 v01 until after NTCIP 1201 v03, *Global Object (GO) Definitions*, was sent for balloting and approval. In May 2010, the normative reference hold was removed, and NTCIP 1210 v01.53 was edited for SDO balloting and approval. Following editing, NTCIP 1210 v01.55 was published.

Compatibility of Versions

To distinguish NTCIP 1210 v01 (as published) from previous drafts, NTCIP 1210 v01 also includes NTCIP 1210 v01.55 on each page header. All NTCIP Standards Publications have a major and minor version number for configuration management. The version number syntax is "v00.00a," with the major version number before the period, and the minor version number and edition letter (if any) after the period.

NTCIP 1210 v01 is designated, and should be cited as, NTCIP 1210 v01. Anyone using NTCIP 1210 v01 should seek information about the version number that is of interest to them in any given circumstance. The MIB, the PRL, and the PICS should all reference the version number of the standards publication that was the source of the excerpted material.

Compliant systems based on later, or higher, version numbers MAY NOT be compatible with compliant systems based on earlier, or lower, version numbers. Anyone using NTCIP 1210 v01 should also consult NTCIP 8004 v02 for specific guidelines on compatibility.

Section 1 GENERAL [INFORMATIVE]

1.1 SCOPE

NTCIP 1210 v01 defines requirements related to the Information Level communications interface between a management station and a signal system master (SSM). This is achieved through the presentation of user needs for such an interface in Section 2 with detailed functional requirements presented in Section 3.

NTCIP 1210 v01 includes references to the communications interface between the SSM and a Signal System Local (SSL). However, the standardized definition of that interface is provided in other standards, such as NTCIP 1202 v02.

NTCIP 1210 v01 only addresses a subset of agency specification (procurement) requirements. NTCIP 1210 v01 does not address requirements related to the accuracy of readings, hardware components, mounting details, etc.

NTCIP 1210 v01 standardizes the communications interface by identifying the various operational needs of users and subsequently identifying the requirements that supported each need. A summary of the conformance requirements are provided in Annex A through a Requirements Traceability Matrix (RTM).

1.1 REFERENCES

Normative references contain provisions that, through reference in this text, constitute provisions of NTCIP 1210 v01. Other references in NTCIP 1210 v01 might provide a complete understanding of the entire protocol and the relations between all parts of the protocol. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on NTCIP 1210 v01 are encouraged to investigate the possibility of applying the most recent editions of the standard listed.
