#### NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety–related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

#### Foreword

This Standards Publication is a NEMA Adoptive Standard based on Part 3 of IEC 61131, *Programmable Controllers*.

This Standards Publication was prepared by a technical committee of the NEMA Automation Products and Systems Section. It was approved in accordance with the bylaws of NEMA and supersedes NEMA Standards Publication ICS 3-1988, Part 3-304.

This Standards Publication provides practical information concerning ratings, construction, test, performance, and manufacture of industrial control equipment. These standards are used by the electrical industry to provide guidelines for the manufacture and proper application of reliable products and equipment and to promote the benefits of repetitive manufacturing and widespread product availability.

NEMA Standards represent the result of many years of research, investigation, and experience by the members of NEMA, its predecessors, its Sections and Committees. They have been developed through continuing consultation among manufacturers, users, and national engineering societies and have resulted in improved serviceability of electrical products with economies to manufacturers and users.

One of the primary purposes of this Standards Publication is to encourage the production of reliable control equipment which, in itself, functions in accordance with these accepted standards. Some portions of these standards, such as electrical spacings and interrupting ratings, have a direct bearing on safety; almost all of the items in this publication, when applied properly, contribute to safety in one way or another.

Properly constructed industrial control equipment is, however, only one factor in minimizing the hazards which may be associated with the use of electricity. The reduction of hazard involves the joint efforts of the various equipment manufacturers, the system designer, the installer, and the user. Information is provided herein to assist users and others in the proper selection of control equipment.

The industrial control manufacturer has limited or no control over the following factors which are vital to safe installation:

- environmental conditions
- system design
- equipment selection and application
- installation
- operating practices
- maintenance

This publication is not intended to instruct the user of control equipment with regard to these factors except insofar as suitable equipment to meet needs can be recognized in this publication and some application guidance is given.

This Standards Publication is necessarily confined to defining the construction requirements for industrial control equipment and to providing recommendations for proper selection for use under normal or certain specific conditions. Since any piece of industrial control equipment can be installed, operated, and maintained in such a manner that hazardous conditions may result, conformance with this publication does not by itself assure a safe installation. When, however, equipment conforming with these standards is properly selected and is installed in accordance with the National Electrical Code and properly maintained, the hazards to persons and property will be reduced.

To continue to serve the best interests of users, NEMA is actively cooperating with other standardization organizations in the development of simple and more universal metrology practices. In this Standards Publication, the U.S. customary units are gradually being supplemented by those of the modernized metric system known as the International Systems of Units (SI). This transition involves no changes in standard dimensions, tolerances, or performance specifications.

NEMA Standards Publications are subject to periodic review. They are revised frequently to reflect user input and to meet changing conditions and technical progress. Users should secure the latest editions.

Inquiries, comments, and proposed or recommended revisions should be submitted to the concerned NEMA product subdivision by contacting the:

Vice President, Technical Services National Electrical Manufacturers Association 1300 North 17th Street Rosslyn, Virginia 22209

# **Referenced Standards**

The following standards contain provisions which, through reference in this text, constitute provisions of this NEMA Standards Publication. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.

# **Amendments**

IEC 61131-3, *Programmable Controllers—Part 3: Programming Languages*, is adopted in its entirety. NEMA Adoptive Standard

Where a conflict exists between the provisions of IA 2.3 and other NEMA Standards Publications, the provisions of IA 2.3 shall govern in the area of programmable controllers and their associated peripherals. NEMA Standard

# **Publication numbering**

As from 1 January 1997 all IEC publications are issued with a designation in the 60000 series. For example, IEC 34-1 is now referred to as IEC 60034-1.

#### Consolidated editions

The IEC is now publishing consolidated versions of its publications. For example, edition numbers 1.0, 1.1 and 1.2 refer, respectively, to the base publication, the base publication incorporating amendment 1 and the base publication incorporating amendments 1 and 2.

#### Further information on IEC publications

The technical content of IEC publications is kept under constant review by the IEC, thus ensuring that the content reflects current technology. Information relating to this publication, including its validity, is available in the IEC Catalogue of publications (see below) in addition to new editions, amendments and corrigenda. Information on the subjects under consideration and work in progress undertaken by the technical committee which has prepared this publication, as well as the list of publications issued, is also available from the following:

#### IEC Web Site (<u>www.iec.ch</u>)

#### Catalogue of IEC publications

The on-line catalogue on the IEC web site (<a href="http://www.iec.ch/searchpub/cur fut.htm">http://www.iec.ch/searchpub/cur fut.htm</a>) enables you to search by a variety of criteria including text searches, technical committees and date of publication. On-line information is also available on recently issued publications, withdrawn and replaced publications, as well as corrigenda.

#### IEC Just Published

This summary of recently issued publications (<a href="http://www.iec.ch/online\_news/justpub/jp\_entry.htm">http://www.iec.ch/online\_news/justpub/jp\_entry.htm</a>) is also available by email. Please contact the Customer Service Centre (see below) for further information.

# CONTENTS

FOREWORD	8
1 General	
1.1 Scope	
1.2 Normative references	
1.3 Definitions	
1.4 Overview and general requirements	14
1.4.1 Software model	14
1.4.2 Communication model	16
1.4.3 Programming model	
1.5 Compliance	
1.5.1 System compliance	
1.5.2 Program compliance	
2 Common elements	23
2.1 Use of printed characters	23
2.1.1 Character set	
2.1.2 Identifiers	
2.1.3 Keywords	
2.1.4 Use of white space	
2.1.5 Comments	
2.1.6 Pragmas	
2.2 External representation of data	
2.2.1 Numeric literals	
2.2.2 Character string literals	
2.2.3 Time literals	
2.2.3.1 Duration	
2.2.3.2 Time of day and date	
2.3 Data types	
2.3.1 Elementary data types	
2.3.2 Generic data types	
2.3.3 Derived data types	
2.3.3.1 Declaration	
2.3.3.2 Initialization	
2.3.3.3 Usage	
2.4 Variables	
2.4.1 Representation	
2.4.1.1. Single element variables	26
2.4.1.2 Multi-element variables	
2.4.2 Initialization	
2.4.3 Declaration	
2.4.3.1 Type assignment	
2.4.3.2 Initial value assignment	
2.5 Program organization units	
2.5.1 Functions	
2.5.1.1 Representation	
2.5.1.1 Representation 2.5.1.2 Execution control	
2.5.1.3 Declaration	
2.5.1.4 Typing, overloading, and type conversion	
2.5.1.5 Standard functions	
2.5.1.5.1 Type conversion functions	
2.5.1.5.2 Numerical functions	
2.5.1.5.3 Bit string functions	
2.5.1.5.4 Selection and comparison functions	
2.5.1.5.5 Character string functions	
2.5.1.5.6 Functions of time data types	
2.5.1.5.7 Functions of enumerated data types	66

2.5.2 Function blocks	
2.5.2.1 Representation	
2.5.2.1a) Use of EN and ENO in function blocks	68
2.5.2.2 Declaration	69
2.5.2.3 Standard function blocks	77
2.5.2.3.1 Bistable elements	77
2.5.2.3.2 Edge detection	78
2.5.2.3.3 Counters	78
2.5.2.3.4 Timers	81
2.5.2.3.5 Communication function blocks	83
2.5.3 Programs	83
2.6 Sequential Function Chart (SFC) elements	
2.6.1 General	
2.6.2 Steps	84
2.6.3 Transitions	86
2.6.4 Actions	
2.6.4.1 Declaration	89
2.6.4.2 Association with steps	
2.6.4.3 Action blocks	
2.6.4.4 Action qualifiers	
2.6.4.5 Action control	
2.6.5 Rules of evolution	
2.6.6 Compatibility of SFC elements	
2.6.7 SFC Compliance requirements	
2.7 Configuration elements	
2.7.1 Configurations, resources, and access paths	
2.7.2 Tasks

# INTERNATIONAL ELECTROTECHNICAL COMMISSION

### PROGRAMMABLE CONTROLLERS -

# Part 3: Programming languages

#### **FOREWORD**

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical specifications, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
- 5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards.
- 6) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61131-3 has been prepared by subcommittee 65B: Devices, of IEC technical committee 65: Industrial-process measurement and control.

The text of this standard is based on the following documents:

FDIS	Report on voting
65B/456/FDIS	65B/465/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This second edition of IEC 61131-3 cancels and replaces the first edition, published in 1993, and constitutes a technical revision.

This International Standard has been reproduced without significant modification to its original contents or drafting.

The committee has decided that the contents of this publication will remain unchanged until 2007. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- · amended.

### PROGRAMMABLE CONTROLLERS -

# Part 3: Programming languages

#### 1 General

#### 1.1 Scope

This part of IEC 61131 specifies syntax and semantics of programming languages for *programmable* controllers as defined in part 1 of IEC 61131.

The functions of program entry, testing, monitoring, operating system, etc., are specified in Part 1 of IEC 61131.

#### 1.2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050 (all parts): International Electrotechnical Vocabulary (IEV)

IEC 60559:1989, Binary floating-point arithmetic for microprocessors systems

IEC 60617-12:1997, Graphical symbols for diagrams – Part 12: Binary logic elements

IEC 60617-13:1993, Graphical symbols for diagrams – Part 13: Analogue elements

IEC 60848:2002, GRAFCET specification language for sequential function charts

IEC 61131-1, Programmable controllers – Part 1: General information

IEC 61131-5, Programmable controllers – Part 5: Communications

ISO/AFNOR: 1989, Dictionary of computer science - The standardised vocabulary

ISO/IEC 10646-1:1993, Information technology – Universal Multiple-Octet Coded Character Set (UCS) – Part 1: Architecture and Basic Multilingual Plane

# 1.3 Definitions

For the purposes of this part of IEC 61131, the following definitions apply. Definitions applying to all parts of IEC 61131 are given in part 1.

- NOTE 1 Terms defined in this subclause are *italicized* where they appear in the bodies of definitions.
- NOTE 2 The notation "(ISO)" following a definition indicates that the definition is taken from the ISO/AFNOR Dictionary of computer science.
- NOTE 3 The ISO/AFNOR Dictionary of computer science and the IEC 60050 should be consulted for terms not defined in this standard.
