NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) Standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its Standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller’s products or services by virtue of this Standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other Standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety–related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.
FOREWORD

This NEMA Standards publication TS 10-2020 Connected Vehicle Infrastructure—Roadside Equipment was developed to procure the equipment for secure communications among vehicles, infrastructure, and personal devices with traveler safety as the highest priority.

In the preparation of NEMA TS 10-2020, the input of users and other interested parties has been sought and evaluated. Inquiries, comments, and proposed or recommended revisions should be submitted to the concerned NEMA product subdivision by contacting the:

NEMA Technical Operations Department
National Electrical Manufacturers Association
1300 North 17th Street, Suite 900
Rosslyn, Virginia 22209

The NEMA 3TS Connected Vehicle Infrastructure Technical Committee developed NEMA TS 10 under the auspices of the NEMA Transportation Management Systems and Associated Control Devices Section (3TS), of which it is a part. The following individuals were Members of the Technical Committee:

<table>
<thead>
<tr>
<th>Company</th>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>360 Network Solutions, LLC</td>

</tr>
</tbody>
</table>

NEMA recognizes that this Standard, NEMA TS 10, has been developed at a time when there is much uncertainty over the continued dedicated use of the 5.9GHz waveband for transportation safety applications. This is due to the outcome of the Federal Communication Commission’s Notice of Proposed Rule Making (NPRM) on the 5.9GHz band being currently awaited. Potential impacts could be in the types of communications technologies permitted in the band, allocation of channels, and the very range of frequencies made available to transportation under licensed use.

While consideration was given to delaying the release of NEMA TS 10, NEMA’s Technical Committee, which prepared the Standard, strongly believes the Standard contains elements that justify its timely release for use by road infrastructure owners and operators (IOOs) for infrastructure equipment.
procurement. This is because NEMA TS 10 contains key elements that enable IOOs to procure equipment safely in the knowledge that it will not be made obsolete by the possible changes in regulations contained in the NPRM. Such elements include the use of multiple modes (radios) in one roadside unit, dual-mode/dual active operation of such equipment, and over-the-air update capability for this equipment.

NEMA does expect that an update to the version of NEMA TS 10 will be needed due to the resultant rule making. However, it is felt that the visibility into the changes provided by comparing the current and updated versions of NEMA TS 10 will help IOOs that have already deployed roadside and on-board units better understand the impacts on their installations.

**CAUTION:** It is the responsibility of the Agency deploying radio equipment procured against this standard to ensure that the equipment is operating legally under the necessary licenses and/or authorizations required by the Federal Communications Commission (FCC).

Section 1
General [Informative]

1.1 Scope

NEMA TS 10-2020 (TS 10) is a Standard for the equipment deployed at roadside to support standardized over-the-air wireless messages, applications, and cybersecurity measures of communications with Connected Vehicles. This Standard describes physical and performance interfaces as well as functionality requirements as defined in Section 2.2.
